Vo	luntary Results Feedback Form
A	I am an examiner in Workgroup: Example: 1610
4	Relevant prior art found, search results used as follows:
	☐ 102 rejection
	☐ 103 rejection
	Cited as being of interest.
	Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	☐ Foreign Patent(s)
	 Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
4	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Results were not useful in determining patentability or understanding the invention.
Con	nments:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 preparing (FHP) is potentially cheaper than chemical synthesis. The present sequence represents the yeast aldehyde dehydrogenase ALD4, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              or diels, polyhydroxyalkonates and copolymers with lactic acid. Incorporation of genes encoding two enzymes makes the host organisms able to produce (3-HP) from (1). The biotechnological method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          an ADH capable of catalysing the production of (3-HP) from (1). 3-HP is a monomer, and is useful e.g. in the production of absorbable prosthetic devices and surgical sutures or for incorporation into beta-lactume, production of actylic acid or formation of trifluoromethylated alcohols
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (GDHT) and aldehyde dehydrouchase (ADH) capable of catalysing the production of (3 HP) from (1); or (iii) carries a genetic construct which expresses the dhaB gene from Klebsiella pneumoniae and a gene for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                or glucose, where the microorganism: (i) expresses genes for non-native enzymes which catalyse the production of (3-HP) from (1); (ii) carries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               } hydroxypropionic acid (3-HP). The method comprises fermenting a
recombinant microorganism in the presence of a source of glycerol (1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  denetic constructions for the expression of a glycerol dehydratase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a method for the production of a hydroxypropionic acid (8\,\mathrm{HP}). The method comprises fermenting a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 5. The DNA construct may contain a promoter region in operative association with a signal peptide coding region. The promoter/signal construct is suitably provided with a flanking restriction site to allow precise coupling of the protein coding region to the signal peptide coding region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            In the constructs of the invention, the promoter region naturally associated with the alcohol dehydrogenase I (alcA) gene and the aidehyde dehydrogenase (aldA) gene of A. nidulans or naturally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                    Query Match
                                                                                                                                                                          Best
                                                                                                                                                                                                                                                               Spores of Cladosporium herbarum are the most common forgal spores found in the air; they can cause allergic reactions. Various Clah allergens and sequences encoding them have now been isolated. The mature Clah53 allergen has moi, wt. 53 kD and is encoded by cDNA sequence AAQB6278. The allergen has homology to alchyde dehydrogenases. Potential epitopic subfragments were identified by computer analysis of the amino acid sequence. See AAR71892-R71906 for potential B-cell epitopes and AAR72815-R72627 for potential T-cell

Species of Alternatia diternata can cause allergic reactions. Various Aira allorgens and sequences encoding them have now been isolated. The mature Alla53 allergen has mol. wt. 53 kD and is encoded by cDNA sequence AAu9527s. The allergen has been long to aldebyde dehydrogenases. Potential epitopic subfigurances were identiced by computer analysis of the amino and send sequence AAAP71804-P71816 for potential R-cell epitopes and AAP71817-P71832 for potential T-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Alternaria alternata allergen Alta53.

     target for treating a specific condition or disease predicted to be associated with AIDHS activity, and in the design of clinical trials of condition of disease predicted to be associated with AIDHS activity. Information on polymorphisms on the ALDHS gene can be applied for studying the biological function of ALDHS as well as in identifying drugs targeting this profession or function. The products of the invention have antialcoholic activity. This segments
                                                                                                                                                                                                                                                        This invention describes a novel isolated genes and haptotypes of the human aldebyde dehydrogenase 5 (LDH5) genes containing polymorphic sites. The polymorphic ALDH5 variant is useful in studying the effect of the variation on the biological activity of ALDH5 and on the binding affinity of candidate drugs targeting ALDH5 for the treatment of affinity of candidate drugs targeting ALDH5 for the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Misc-difference 470
                                                                                                                                                     binding affinities of one or more candidate drugs targeting the ALDHS protein. ALDHS proteins may be used to generate antibodies. Haplotyping method can be used by scientists to validate ALDHS as a candidate
                                                                                                                                                                                                                                                                                                                                                                                                                 New genetic variants with polymorphisms in the aldehyde dehydrogenase (ALDH5) gene, useful for studying the function of ALDH5, and for expressing ALDH5 protein which is useful in screening drugs for

                                                                                                                                                                                             cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polynucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences
 Sequence
                               prostate cancer. The nucleic acid sequences are particularly useful
in gene therapy, as a vaccine or in antisense applications.
ABG61800-ABG61944 represent prostate cancer associated proteins.
                                                                           prostate cancer in mammals. The prostate cancer-associated genes are useful tor diagnosing or treating prostate cancer, as well as for identifying modulators of prostate cancer or agents that inhibit
                                                                                                                                               are differentially expressed in prostate fumour tissue or in prostate cancer and are derived from the tissues of various graanisms such as humans or other mammals (e.g. mice, showp a

In vitro diagnosis and monitoring of endometriosis, comprises detecting reduced expression of specific gene products, e.g. from the fibronectin gene

Claim 1; Page 17-18; 21pp; German.

The present invention relates to a method for the in vitro diagnosis of endometriosis by defermining the amount of gone product from at least one specific gene in a patient sample and comparing this with the amount of gene product in a control sample A reduced level is indicative of

polypeptide (11) sequences. (1) is useful as hybridisation probes, and doublewes chain reaction (PCR) primers, oligomers, and for chromosome and your mapping, and in re-ambinant production of (11). The polymucleotides are also used in diagnostics as expressed sequence tags polymucleotides are also used in diagnostics as expressed sequence tags to restore normal activity of (11) or to treat disease states involving (11) for special in quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement (11) and its binding partners are useful in medical imaging of sites expressing (11). (1) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensies, gene mapping, identification of mutations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               81 DPIDRGKALYRLAELIFQDKPVIASIETLDNGKA-ISSSRODVDLVINYLKSSAGPADKI 139

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            22 TGLFINNKFVPSKQNKTFEVINPSTEEEICHIYEGPEDDVFEAVQAADPAFSNGS-WNGI 80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and to produce other types of data and products dependent on DNA and amino acid sequences. ABGUUU10-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note. The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           200 SALYVSKYIPQAGIPPGVINIVSGFGKIVVEAITNHPKIKKVAFTGSTATGRHIYQSAA-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                subunits of a plant ATP citrate lyase (ACL), Arabidopsis pyruvate decaptoxylase (PTC), Arabidopsis slowlyde dehydrogenase (ALLH), Arabidopsis slowlyde dehydrogenase (ALLH), specially ALLH-I and ALLH-I the pylypeptiles can be expressed by standard recombinant methodology. The ACS, ppDH, ACL, PDC and ALDH polypeptides, methods and nucleic acid molecules of the invention are used to alter the level of acetyl COA in a plant or plant cell, tissues or organs. A decrease in acetyl COA is expected to affect the biosynthesis of very long chain fatty acids and flavonoids. The enzymes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           acetyl CoA synthetase (ACS), various subunits (specifically the E3 subunit) of plant plastidic pyrovate dehydrogenase (pFFH), the A and B

New isolated nucleic acid detection reagent for detecting 1000 or more

may also be used for in vitro synthesis of acetyl CoA, which in turn can be used to produce acetyl CoA hytochemicals (plastidic ACS, pPDH, ACL, pyruvate decarboxylase, acetyl CoA hydrolase, mitochondrial pyruvate dehydrogenase and aldehyde dehydrogenase are involved in the biosynthesis

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from brosophila. The invention is useful in developmental biology and in Pluridating cell signalling and cell-cell interactions in higher eukaryotes for the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              81 DPIDRGKALTRLAELIEQDKPVIASIFTLDNGKALSSSRGDVDLVINYLKSSAGFADKID 140

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GUGVVNVTSNAPADAAQTVERLTANPAVRRVNFTGSTBVGRTVGELSA 241
